SUMMARY

Product Manager with 8+ years delivering technical products and driving product strategy and roadmaps for AI-powered platforms. Expert in experimentation, data-driven decision making, and cross-functional leadership with Engineering, Data Science, and UX. Proven track record of launching products and AI-native solutions, measuring impact through adoption and engagement metrics.

Core Competencies: Product Management | Infrastructure | Product Strategy | Roadmap Prioritization | Cross-functional Collaboration | Data-Driven Decision Making | AI-native product development | GTM strategy

EXPERIENCE

SENIOR PARTNER MANAGER, AWS

MAY 2025 - PRESENT

- Drove 157% revenue growth (\$84M to \$216M) by leading product strategy and roadmap for AWS Marketplace partnership platform, prioritizing license switching, new customer acquisition, and multi-ISV capabilities to scale impact.
- Led quarterly business reviews aligning priorities and driving GTM execution across cross-functional teams including sales, product, legal, and finance, strengthening partner and internal stakeholder collaboration.
- Improved customer retention by 20% by identifying churn drivers and launching License Switching feature enabling private deals with deeper discounts, enhancing user engagement.
- Initiated CY2026 growth strategy targeting new customers and expanding Red Hat partnership including ROSA expansion, projected to generate additional \$100M and drive scalable market growth.

PRODUCT MANAGER, META - Infrastructure and Data Centers

JUN 2024 - APR 2025

- Increased new user adoption by 60% and accelerated analysis time by 75% by redesigning Digital Twin internal tool UI with user-centric design and iterative UX testing, delivering intuitive experiences.
- Cut costs by \$250M per data center region and drove long-term impact by developing multi-year strategic roadmap for Digital Twin platform, defining virtual commissioning strategy with simulated load banks.
- Reduced server unavailability by 30% by launching ML-enabled alerting tool (0→1), conducting deep user research, and partnering with ML engineering to leverage AI for operational excellence.
- Cut modeling time by 20% and improved forecasting accuracy by shipping environmental scenario planner for AI data centers (0→1), enabling proactive risk mitigation and data-driven decision making.

SENIOR TECHNICAL PRODUCT MANAGER, ZOOX

FEB 2022 - JUN 2024

- Drove 25% reduction in ML infrastructure costs by defining data retention strategy and influencing behavior shifts across 200+ engineers via workflow redesign and process automation, optimizing ML-powered workflows.
- Boosted adoption by 20% and satisfaction by 15% by leading extensive user research, authoring PRDs for 3 major releases, and defining success metrics to refine ML platform UX and drive engagement.
- Enabled on-time public road launch by launching remote diagnostics platform (0→1) for Zook robotaxis through deep operational insights and regulatory navigation, enhancing operational reliability and compliance.
- Cut operational costs by 40% and improved vehicle safety metrics by shipping autonomous braking feature through cross-functional partnership with safety, legal, and engineering teams using data-driven decision making.
- Boosted user trust by 30% by developing 3D visualization app for Zook riders through iterative customer research, testing, and UX-driven product scope expansion.

PRODUCT DESIGN LEAD, APPLE

MAY 2015 - FEB 2022

- Drove NPI roadmap and led four iPhone touchscreen programs (X, XS, 11, 12) from POC to mass production by defining features and developing prototypes.
- Designed and deployed fully automated line for Vision Pro's 4K display testing, managed stakeholder expectations across shifting priorities and schedules to deliver 4 distinct types of test stations across 3 countries.
- Designed, built, and shipped Apple's first OLED chip-level testing platform, driving a 50% improvement in yield.

- Secured \$2M investment from Apple leadership for robotic testing systems in Thailand, cutting costs by \$500K and boosting production output by 15%.
- Streamlined procurement by establishing supplier selection and engagement model with equipment design approval and shipping process.
- Headed 6-member taskforce to eliminate a product defect issue which could have impacted 200K iPhone customers; ran experiments to identify root cause, analyzed performance data and implemented strategic design improvements.
- Headed over 50 functional design reviews by presenting technical details, reviewing current status and highlighting risk mitigation strategies to get buy-in across various Apple stakeholders.

SENIOR PRODUCT DESIGN ENGINEER, CUMMINS

DEC 2013 - MAY 2015

- Integrated Cummins engine platform with Chrysler Ram and Nissan Titan; created product designs and negotiated key performance metrics.
- Achieved \$500K annual savings by redesigning critical powertrain components and shrinking bill of materials on Ram trucks.
- Cut design cycle time from 8 to 6 weeks by leading team initiative to develop FEA simulation-driven product designs for powertrain components.
- Headed FMEA meetings to review key risk items and implemented design enhancements to mitigate associated risks.

STRUCTURAL DESIGN ANALYST, CATERPILLAR

DEC 2011 - NOV 2013

- Aligned ROPS structural design with ISO standards and Caterpillar goals, mitigating failure risks and optimizing production and materials costs.
- **Pioneered novel simulation technique**, enhancing accuracy by 10% and slashing computational time by 20%.
- **Boosted wheel-loader ROPS capacity and yielded annual cost savings of \$95K** by identifying and executing a bolted-joint improvement project.

PERSONAL PROJECTS

THECARDSOUT.APP - AI-Assisted Credit Card Discovery Platform

- Built and launched full-stack recommendation product with multi-model orchestration (GPT-5, Claude, DeepSeek) and automated data ingestion pipelines using bank-specific crawlers and validation scripts.
- Shipped guided workflow UX with autocomplete, local persistence, and mobile-first design principles to optimize user completion rates and improve recommendation accuracy.
- Implemented SEO-optimized architecture for issuer rules, transfer partners, and calculator pages, demonstrating complex system integration similar to BMS/DCIM platform coordination.

APPLYSTUDIO - AI-Powered Resume Tailoring & Job Search Platform

- Built and launched full-stack job application platform with in-house web scraper outperforming commercial solutions (ScrapingBee) by 20% on difficult sites, extracting job descriptions, requirements, and application questions.
- Designed multi-agent AI workflow system using GPT-5.1 for resume tailoring with bullet-by-bullet accept/edit/reject UI, cover letter generation, application question answering, and comprehensive ATS scoring across 20+ simultaneous job postings.
- Implemented real-time job fit scoring engine combining ATS keyword matching, skill gap analysis, and recommendation algorithms to prioritize high-fit opportunities and reduce application friction.

EDUCATION

MBA – University of California, Berkeley, Haas School of Business

2020

MS, Mechanical Engineering – University of Illinois, Urbana-Champaign

2011

BS, Mechanical Engineering – GIKI Institute, Pakistan [GOLD MEDALIST]

2009
