

The terrain is shifting. The compass isn't.

Every child has a *North Star.* Yearling helps you find it.

An operating system for a child's developmental journey — where aspirations, feedback, and logistics finally converge.

THE 2026 MINDSET

Parents can no longer rely on the playbook they were *raised with*.

AI is rewriting the future skill landscape. The credentials that mattered in 2005 won't define the 2040s. The deliberate parent already knows this — and is doing the work manually, in journals and group chats, trying to hold the through-line.

1–3+

Children, ages 5–14, in the typical Yearling family

2+

Structured activities, every week, every kid

∞

Notes, group chats, mental tabs holding it together

"Soccer Tuesday, piano Wednesday, robotics Saturday — and no idea if any of it is preparing her for the world she'll actually grow up in."

— Maya R. — a deliberate parent

STRUCTURED PARENTING IS BROKEN

Three layers that never *talk* to each other.

Calendar apps own the schedule. Schools speak loudest on feedback. Aspirations — both the parents' and the child's own voice — live nowhere structured, and corrode when the coordination tax climbs.

LOGISTICS

OWNED BY APPS

Calendars, carpools, signups.

FEEDBACK

SPLIT ACROSS THE VILLAGE

Coach notes, teacher emails, a grandparent's instinct.

ASPIRATION

HELD BY NO ONE

What parents want — and what the child themselves dreams of.

THE GAP *The through-line — from today's drop-off to who they're becoming — has **no system**.*

MEET NOVA

A quiet, *intelligent* companion that holds the whole picture.

Nova ingests the noise — schedules, coach notes, conversations — and reflects it back as proportional, attributed, parent-actionable signal across **six developmental capacities**.

- Physicality
- Intellect
- Creativity
- Resilience
- Leadership
- Autonomy

● NOVA · NOTICE

"Mira's coach noted she *hung back* at the scrimmage. That's the third quiet week — worth a check-in, not a course-correct."

Source · Soccer · 3 sessions

● NOVA · PATTERN

Her ceramics teacher used the word "*inventive*" twice this term. **Creativity** is up — without you steering it.

CREATIVITY 3 attributed signals · last 30 days

● NOVA · NUDGE

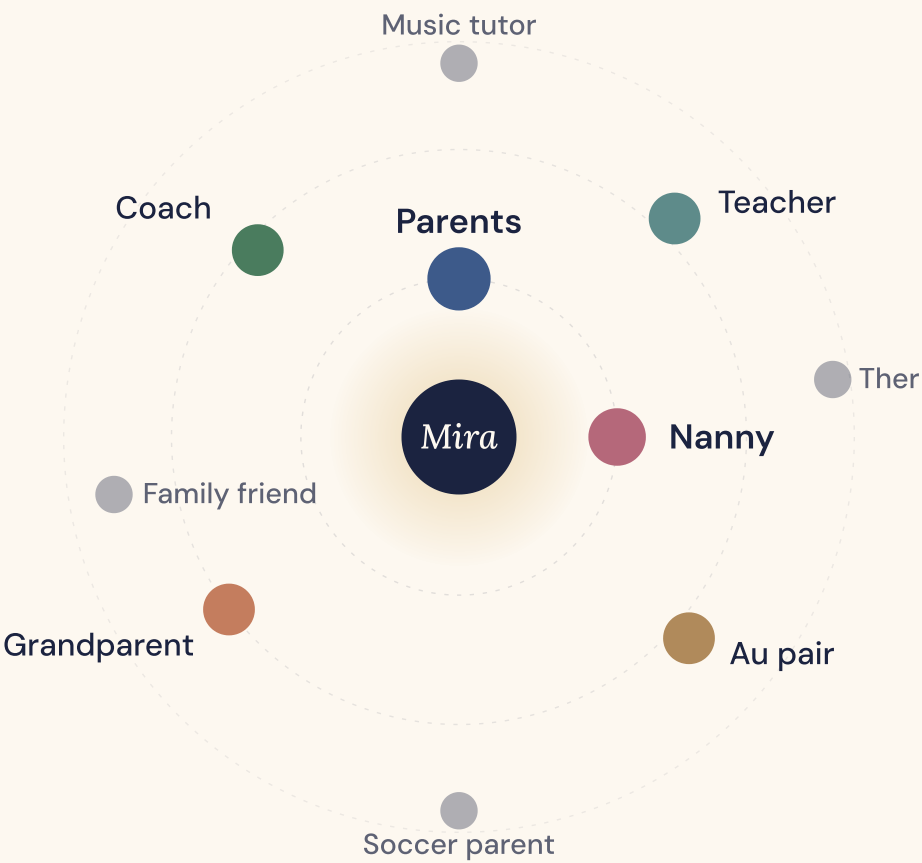

A *Young Entrepreneurs* class starts March 4 — six Saturdays, kids run a real lemonade stand. Built for *autonomy*.

AUTONOMY Recommended activity · 0.4mi away

BEYOND PARENT, TEACHER, COACH

A child is raised by *a village*.
Nova listens to all of it.

Invite your village — anyone *trusted* with regular contact — and Nova captures their observations, weighting each by interaction depth and context.

Every observer carries *weighted signal*.

Parents · daily care	w 1.00
Nanny · daily, in-home	w 0.85
Coach · weekly, structured	w 0.70
Teacher · 5 days/week, academic	w 0.70
Grandparent · weekend, longitudinal	w 0.55
Au pair · mornings, transitions	w 0.50

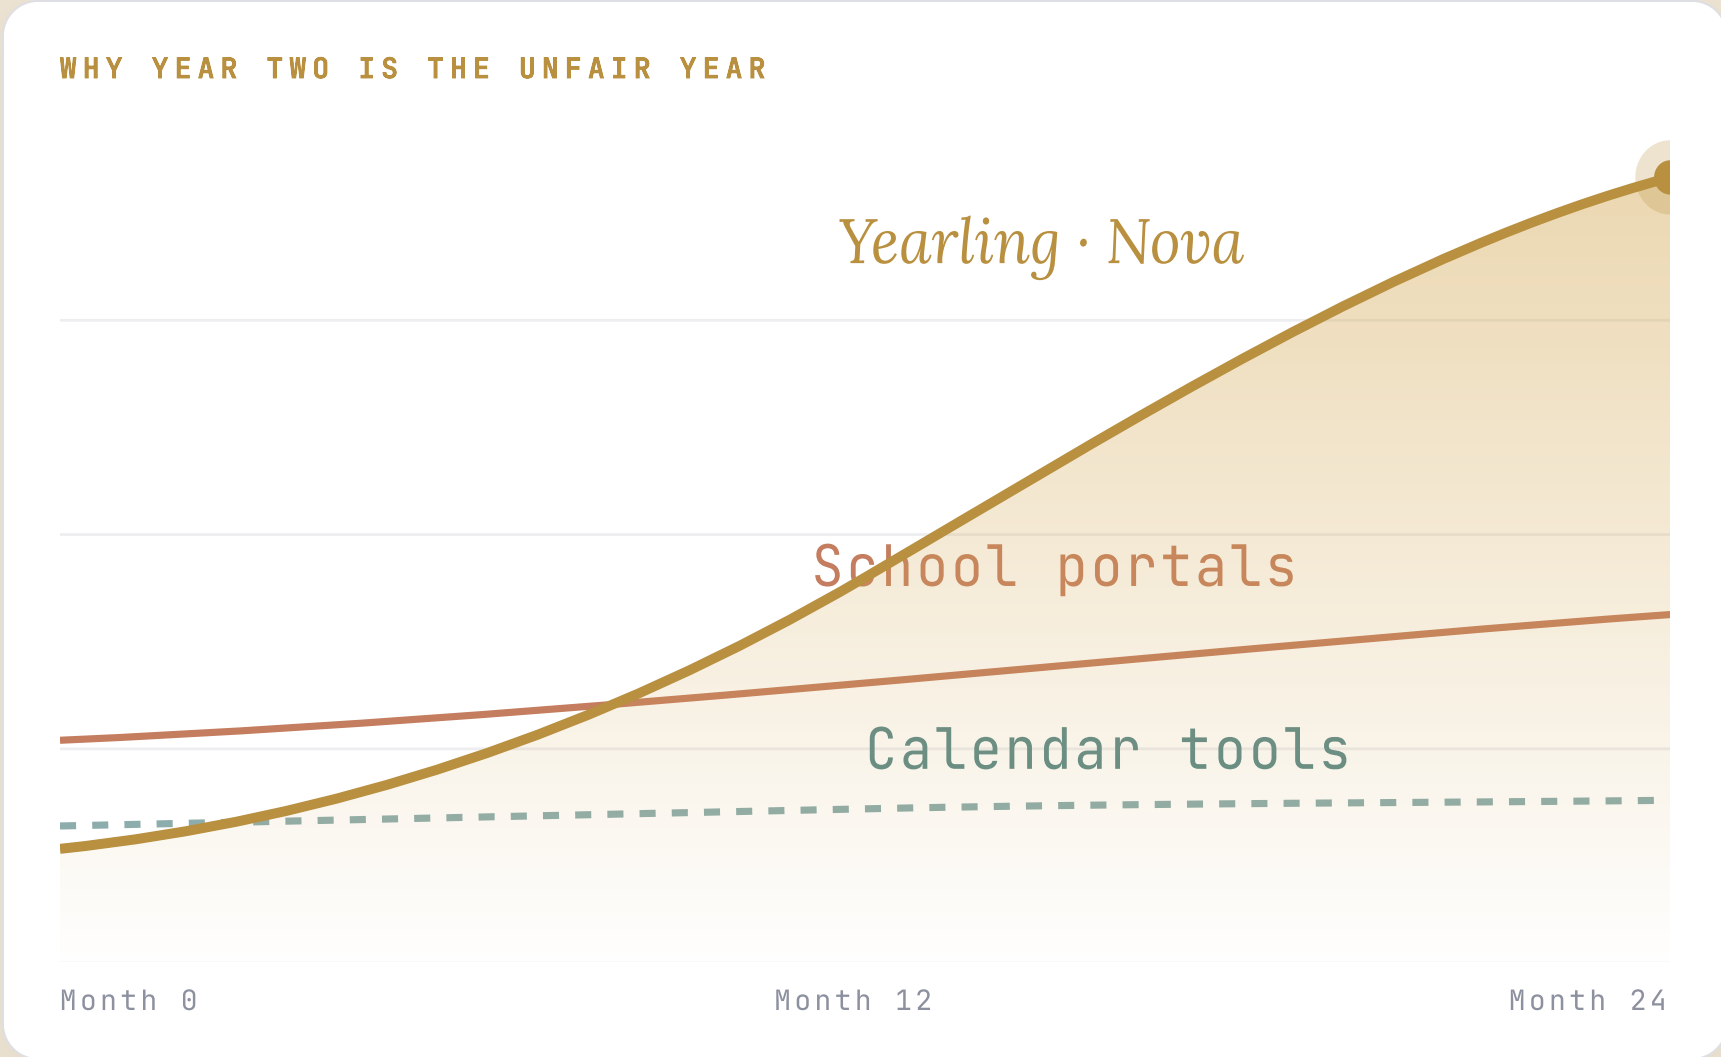

Weights flex by context: a music tutor's note about practice habits matters more than their note about a soccer scrimmage.

ACROSS TIME, SOURCES, AND SETTINGS

A graph only Yearling can build — *and compound.*

Mira's distinct shape — built from real *activities* she did and *spark logs* her village wrote, not a generic age band.

Every spark logged today widens the gap tomorrow — a graph that *compounds* while point-tools plateau.

THE ARC

A graph is just a picture. Nova turns it into *a plan you can act on.*

*Each season, Nova reads the graph, takes a stand on what's worth investing in next, and recommends the **shape** of activity that fits this child — then helps you find the real local class.*

- 01 **Nova's read**
A short, dismissable narrative on where this child is right now — derived from the graph, not from a generic age band.
- 02 **Seasonal thesis**
Nova drafts the bet for the upcoming planning window. The parent can rewrite it. One thesis per child, per season.
- 03 **Recommended directions**
Ranked against the thesis. Each card explains *why for this child*, not why in the abstract.
- 04 **Find the real class**
Nova hands the parent off to a search tuned to the direction — cadence, format, neighborhood. Pick a class; Nova starts listening the moment it hits the calendar.
